I'm a Research Scientist at Samsung AI Center Moscow. I (almost) received a PhD in Bayesian deep learning @bayesgroup so I can do math (mostly with Gaussian distributions) and make big overcomplicated DNNs work :)

My research interests are focused on crafting and training reliable and data-efficient machine learning models.

Prior to that, I was a part of Yandex.Research team (a Russian search giant), and did internships at Yandex, Rambler, and Center of Deep Learning and Bayesian Methods NRU HSE. I received a master's degree at Moscow Institute of Physics and Technology and Yandex School of Data Analysis (eq. to MSc programm run by Yandex). I did a bachelor's degree at Moscow State Technical University with a major in applied math and computer science.

EDUCATION

- *2017-2021* PhD in Computer Science, **Centre of Deep Learning National Research University HSE**. My PhD is focused on *applications and understanding of stochastic deep learning models*, Advisor: Dmitry Vetrov.

- *2015-2017* MSc in Computer Science, **Moscow Institute of Physics and Technology** jointly with **Yandex School of Data Analysis**, where I worked with Dmitry Vetrov on learning sparse DNNs.

- 2011-2015 BSc in Computer Science **Bauman Moscow State Technical University** with a double major in applied math and cs. I worked on linguistically motivated topic models with Natalia Loukachevitch.

PROFESSIONAL EXPERIENCE

- **Lead Engineer (eq. Research Scientist)**, Samsung AI Center (2018 - Now):
  The topics I worked on include: uncertainty estimation, generative models, learnable data augmentation, self-supervised learning, transfer learning for RL. Since 2021 I'm helping to manage the lab.

- **Research Scientist**, **Y**andex Research (*2017 - 2018*):
  I worked on a group-level sparsification and uncertainty estimation. The method was applied to accelerate the feature extraction process for image retrieval.

- **Research Intern**, Centre of Deep Learning and Bayesian Methods NRU HSE (2016 - 2017):
  I worked on sparsification of DNNs. This line of research led to Sparse Variational Dropout and started a new class of sparsification methods.

- **Machine Learning Engineer Intern**, **Y**andex Music Deep Learning Group (summer of 2016):
  I worked on feature extraction techniques for music data with convolutional neural networks. I also developed an evaluation of learned representations. The representations were used in the content-based recommendation system for yandex music.

- **Machine Learning Engineer Intern**, Rambler&Co (May - Oct 2015):
  Worked on demographic classification and recommendation systems. My responsibility included improving the quality and performance of classifiers, automatic feature extraction algorithms, and recommendation algorithms. Stack of technologies: Hadoop, Hive, Spark, XGboost, VW, gensim.

CODE
- Check out very short and simple and fan to make implementations of ML algorithms:
  - Gradient Boosting
  - Real NVP
  - Quantile Regression DQN (Distributional RL)
- Also, check out more solid implementations (at least they can do ImageNet):
  - Multi-GPU SimCLRv1
  - Ensembles (Deep ensembles, Snapshot ensembles, cSGLD, FGE, etc.)

REVIEWING
- Conferences:
  - International Conference on Machine Learning, ICML (2019, 2020 top-33% highest-scored reviewers)
  - Neural Information Processing Systems, NeurIPS 2019 (top-50% highest-scored reviewers)
  - International Conference on Learning Representations, ICLR (2020, 2021)
- Workshops:
  - ICML Workshop on Invertible Neural Networks (2019, invertibleworkshop.github.io)
  - Bayesian Deep Learning Workshop (since 2017, bayesiandeeplearning.org)

TEACHING
- Supervisor of reading clubs on machine learning at HSE and Yandex school of data analysis (since 2017)
- Talks and practical sessions at **Deep|Bayes** Summer School on Bayesian Deep Learning (since 2017)
- Lecturer, Moscow Institute of Physics and Technology: I was a lecturer and manager of the deep learning brunch of a facility-wide machine learning course ~60 students (ml-mipt.github.io). Also, I taught deep learning and practical sessions on cutting-edge ML algorithms on a facultative course "Data Mining in Action" ~ 200 students (https://bit.ly/3eRLGYp). The goal of this course is to make ML education available for everyone for free.

SUPERVISION:
- Alexander Lyzhov (moved to The Center on Long-Term Risk), Deep Neural Network Ensembles: Analysis and Approaches to Diversification (MSc, 2020)
- Andrei Atanov (PhD candidate at EPFL), Effective Learning of Deep Neural Networks Ensembles (BSc, 2018), Learning Deep Models with Small Data (MSc, 2020)
- Evgenii Nikishin (PhD candidate at Cornell), Stability Improvement and Knowledge Transfer in Deep Reinforcement Learning (MSc, 2019)

FRAMEWORKS & PROGRAMMING LANGUAGES:
- I'm fluent in Python and I use to code in C/C++, Go, language is not a problem after all.
- I'm also fluent with common python libs such as NumPy, Matplotlib, scikit-learn, etc.
- My primary deep learning framework at the moment is PyTorch. Prior to that, I had a decent experience with Theano+Lagange and TensorFlow.
- I have experience with MapReduce, Hadoop, Hive, and Spark.
